DETAILED ACTION

Allowable Subject Matter

Claims 2-10 and 13-23 are allowed over the prior art of record as filed in the 11/13/2009.

The following is an examiner's statement of reasons for allowance: The claims in this application have been allowed because the prior art of record fails to disclose either singly or in combination the claimed device of dose applicator with a knob that is rotated from its zero position to set a dose, this in turn rotates an indexer, which through its peg turns a ring by pushing on one of the teeth. A position is reached wherein the free end portion of the peg meets a cam surface. On continued rotation of the knob, the peg is forced radially inwards to clear the tooth that it has just been pushing against. The ring, having been shifted through one-seventh of a complete revolution is then left stationary while the knob is turned further to whatever dose is required. When a syringe actuation trigger is pressed, the knob winds back again to its zero position, taking with it the indexer.

The closest prior art of record is Chanoch (USPN5,674,204) and Balkwill (USPN5,379,585), however these references do not disclose the device as claimed or described above.

Regarding claims 15, 16 and 17, the closest prior art of record fails to teach among all the limitations or render obvious the counter member connected by a lost motion connection to a dose setting element which is operable to register an indication of the of a dosage and return the dose setting without moving the counter member.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
